Traceability for FSMA 204 and PTI, built into every case

Continuum Traceability is a web-based system for FSMA 204 and PTI traceability. Record every Critical Tracking Event, print GS1-128 case and SSCC pallet labels on your own printers, and trace any lot in seconds. Nothing to install.

RECORD. LABEL. TRACE. REPORT.

FSMA 204 KDEs | GS1-128 & SSCC | Web browser | English & Español

THE OLD WAY

- Order pre-printed label stock for every GTIN and pack configuration, and wait days for it
- Hand-key case tag details onto a spreadsheet for every pack run
- File paper pack sheets and hope they are organized when someone asks
- When FDA asks, build a sortable spreadsheet by hand within 24 hours
- During a recall, piece together which lots went where, case by case

WITH CONTINUUM TRACEABILITY

- Set up each GTIN once, with no re-ordering labels from a vendor
- Record the FSMA 204 Key Data Elements at each tracking event
- Already logged upstream? Source, date, commodity, variety and quantity carry forward
- Print case and pallet labels on demand as PDF, ZPL or straight to your printers
- Trace any lot one step back and forward, and download FDA's sortable spreadsheet in minutes

HOW IT WORKS

1 Set up once

Add each GTIN, UPC and PLU, plus your sources, fields, destinations and locations with GLNs and GPS coordinates.

2 Record every event

Harvesting, cooling, initial packing, receiving, shipping and transformation, each with its FSMA 204 data elements.

3 Label, trace and report

Print labels, trace or recall a lot, and send FDA or your buyers the records they ask for.

24 hrs
FDA sortable spreadsheet, on demand

2
Label types: case and pallet

Built for How Produce Teams Actually Work

Everything from master data to a printed label to a finished trace.

Set up once
A GTIN, UPC and PLU for each variety and pack style. Sources, fields, destinations and locations with GLNs and GPS. Past records keep the details they were saved with.

Capture every event
Harvesting, cooling, packing, receiving, shipping and transformation. Event sets for produce, sprouts with seed lots, aquaculture and fishing-vessel catch records.

Print and label
GS1-128 case labels with GTIN, lot, date, PTI voice pick code and a QR code to a public trace page. SSCC pallet labels tie a pallet's cases together.

Trace and recall
Trace any lot one step back and one step forward, transformations included. Recall by source and dates or by lot code, with the customers to notify.

Report to FDA and buyers
FDA's sortable spreadsheet in its own layout, as Excel or CSV. Shipping KDEs to ReposiTrak over SFTP or as a portal file. Production reports in English or Spanish.

Plan and exemption records
The written plan FSMA 204 requires (21 CFR 1.1315), drafted from your data, plus the assurances, kill-step records and 3-year agreements that exemptions rely on, with renewal reminders.

Print Bridge: Labels and Reports Straight to Your Printers

A small Windows program connects Continuum Traceability to the printers at your packing shed or office, so there is no PDF to open and no print dialog.

WORKS WITH **Zebra and ZPL printers** **Office printers** **USB, network or shared**

1 Install and pair
On any Windows 10 or 11 computer with printers, using a one-time code. Nothing to open in your firewall.

2 Choose the printers
Decide what each one prints: carton labels, pallet labels or documents. Set a default for the company or each person.

3 Print and see it printed
Pick the printer and copies, preview, print. A message follows the job and says so if the printer runs out of paper or labels.

Prefer to print yourself? Every label and report still opens as a PDF, for any printer.

WHAT TO EXPECT

See it built for you
Tell us how your labeling and trace-back work today and we will show you the same workflow in Continuum. Same-day consultations are available.

Free consultation and estimate
Walk through your products, pack styles and printers, and get an estimate for your operation.

Your data, your records
Continuum is a hosted subscription service. Your team builds and manages its own records and can export them.

Let's simplify traceability, together.

Record. Label. Trace. FDA-ready.
