

Pest control management, from the trap to the invoice

Built for small pest control companies serving homes, businesses and the produce industry. Manage clients, log station inspections from the field, share reports and documents through a client portal, and bill for the work, from one web application and a mobile app for technicians.

PAPERLESS. AUDIT-READY. BILLED FROM THE SAME RECORDS.

Web + iOS & Android

Online & offline

Client portal

English & Español

THE CHALLENGE

- Heavy load of checklists, client logs and compliance paperwork
- Missing entries that can cost audit points
- Hours of preparation before every audit
- Findings and billing data typed again into reports and invoices

THE SOLUTION

- Electronic logs with a secure time and date stamp
- Prevents record omissions before they cost audit points
- Audit-ready in just a few clicks
- Invoices created from the same field records

HOW IT WORKS

1

Set up your program

Add buildings, areas, station groups, numbered traps and the questions each one asks. Reuse buildings across clients.

2

Inspect from the field

Technicians log pest counts, items replaced and comments trap by trap. Works online and offline, and syncs to the web app.

3

Report and bill

Print sighting, IPM and trend reports, share them in a client portal, and turn field records into invoices.

Up to 70%

Fewer clerical tasks and costs

Everything a Pest Control Program Needs

A user-friendly interface that gets your staff trained quickly.

Set it up your way

Reusable buildings, areas and numbered traps, with questions you configure. English and Spanish station names.

Technician mobile app

iOS and Android, online and offline. Customer, building and area navigation with progress counts.

Reports that print

Pest Sighting Log, Rodent Site Log, IPM report, and Pest Analysis in summary and trap-level detail.

Client portal

Clients see only their own reports and documents, with an approval workflow for documents.

Documents and agreements

Folder-based storage per client. Generate client agreements from reusable templates.

Control and security

Page-level permissions, sign-in audit log, device licensing and password policy.

Client Invoicing, Built In

Bill from the technician records you already have. Nothing is entered twice.

CHARGES

- Usage-based charges from checkboxes and numeric answers recorded by technicians
- Recurring charges for fixed-amount service contracts
- Prices in effect at billing time are kept on each invoice
- Technicians never see billing information

TAX AND EXPORT

- Separate tax rates for services and materials, by jurisdiction
- Track client tax exemption certificates
- Email invoices to client contacts, or print as PDF
- Export to QuickBooks Desktop and QuickBooks Online

BILLING ROUTINE

1 Preview charges

2 Create draft

3 Edit

4 Issue invoice

5 Print or email

6 Export

Issued invoices are never deleted. To correct one, void it and re-bill.

Configure Questions Without Code

Your team decides what is recorded at every trap.

Roles and Access

Everyone sees what they need, and nothing more.

System Administrator

One account per company. Manages sites, security policy, email, users and device licensing.

Site Administrator

Runs one location: clients, users and templates. Cannot see other sites.

Standard User

Office and operations staff. Access is set page by page.

Remote Technician

Field staff using the mobile app, each with their own login.

Client (portal user)

Customers view only their own reports and documents.

Every company

Gets its own web address and complete account isolation.

WHAT TO EXPECT

See it built for you

Tell us how your team logs stations, reports to clients and bills today, and we will show you the same workflow in Continuum.

Free consultation and estimate

Pricing depends on the number of mobile devices that run the Continuum app. People who use it in a web browser do not count toward that number.

Hosted subscription

Continuum is a hosted (SaaS) subscription service. The app is free to download and works with a Continuum Pest Control subscription.
