Food safety and compliance, digital and self-managed

Continuum Food Safety puts your SOPs, forms, logs and verification tasks in one cloud system, on any phone, tablet or laptop. Fully customizable, in English, Spanish and French, and built to work offline.

PAPERLESS. AUDITABLE. AUDIT-READY.

iOS & Android | Web browser | Online & offline | English · Español · Français

THE CHALLENGE

- Rising requirements from the FDA (FSMA), USDA, retailers and auditors
- Mounting paperwork: logs, SOPs, plans, policies
- Constant inspections needing photos and corrective actions
- Missed or late inspections found only at audit time
- Oversight at scale, hard to verify by hand

THE SOLUTION

- Digitizes daily, weekly and annual inspections, even several a day
- Replaces paper folders with secure digital reports
- Keeps every compliance record backed up and audit-ready, with a read-only audit trail
- Flags missing and late inspections, with a daily email
- Automatic work orders for out-of-compliance findings

HOW IT WORKS

1 Build your program

Add buildings, locations, areas, monitoring questions and self-audits yourself. No code required.

2 Inspect from the field

Answer on any device, add up to five photos per question. Offline data syncs when connectivity returns.

3 Report and act

Reports generate instantly in PDF, in English, Spanish or French. Alerts and work orders route findings to the right people.

About 30%	11	EN · ES · FR	Offline
Time saved, customer-reported	Answer types	Web and reports; app in EN / ES	Syncs when back online

Customers report saving about 30% of inspection time when no issues are found, and more when issues are found. Results vary by operation.

Built for How Food Safety Teams Actually Work

Meeting the challenge, feature by feature.

Multilingual
Screens and reports in English, Spanish and French (Canada). Each person works in their own language.

Access anywhere
Web access from any computer or device with a browser. Native iOS and Android apps for the field.

Fully customizable
Tailor buildings, areas, questions and audits to match your program.

Self-managed
Your team runs it, with no vendor tickets required.

Configurable alerts
Automatic email alerts for out-of-compliance findings, sent to the notification lists you set up.

Certification-ready
Built-in document management for third-party certification compliance.

Ready for the Certifications You Answer To

Import self-audits for the standards your buyers require.

PrimusGFS | GLOBALG.A.P. | SQF | CanadaGAP | SENASICA (SRRC) | FSMA | FSVP | USDA

PrimusGFS, GLOBALG.A.P., SQF and CanadaGAP are trademarks of their respective owners. Continuum is not affiliated with or endorsed by them or by SENASICA.

Supplier Verification and Audit-Ready Reporting

Foreign Supplier Verification Program (FSVP) support built in.

SUPPLIER & DOCUMENT CONTROL

- Grant and manage supplier access
- Add or void suppliers' risk assessments and documents
- Add, rename or move folders
- Add, move or void documents

REPORTING

- FDA-ready reports in minutes, for any food safety auditor
- Filter any report by custom date range
- PDF format, in English, Spanish or French
- 13 log report formats, plus self-audit charts, dashboards and benchmarks
- Individual page-level security

Mobile-First Execution

Everything works from the field.

Push updates
Send changes from the website to selected devices, or let any device sync on its own.

Android & iOS
Native apps for both platforms.

Online & offline
Offline data stores on the device and syncs when connectivity returns.

Photo evidence
Capture up to five photos per question.

Instant reports
Self-audit and monitoring reports generate immediately.

Automatic work orders
Out-of-compliance findings automatically generate work orders.

FSSC 22000 Records, Built In NEW

Record-keeping for FSSC 22000 version 6, in the same system as your daily logs.

- **Editors and approvers.** Anyone with access can draft a record. Approving, voiding or releasing product is reserved for approvers.
- **Nothing approved half-finished.** Each record shows what is still missing before it can be approved.
- **Approved records stay fixed.** Changes go through a new revision, and the history is kept.
- **Review reminders.** Plans and documents come back for review on the cycle you set.

10 RECORD REGISTERS

FSSC plans | Incidents | Management review | Environmental monitoring | Equipment & calibration | Training & competence | Hazard analysis & HACCP | Product development & labels | Verification & FSMS updates | Specifications register

FSSC plans cover the food safety policy and objectives, food defense, food fraud, food safety culture, allergens, environmental monitoring and food loss and waste. Incidents cover holds, recalls, mock recalls, complaints and emergency drills.

Records You Can Stand Behind NEW

Show an auditor what happened to every record, and that nothing changed behind the scenes.

AUDIT TRAIL & SIGNED LOGS

- Every addition, change, void, reopen and approval is recorded: who, when, from where, and the values before and after
- The audit trail is read-only, even for administrators
- Signed logs are locked. A correction means reopening the log with a reason and signing it again
- Voids can require a reason, set per site

DOCUMENT CONTROL

- New uploads stay drafts until an approver approves them
- An approved revision replaces the previous one automatically
- Review dates, with a list of documents coming due
- Document register: the master list of current documents
- Record retention and review cycles set per site

Never Miss an Inspection NEW

Know what was expected, what was done and what was not, at every site.

Several inspections a day
Set a minimum number of inspections per day for high-frequency areas.

Operating calendar
Seasons, working days and closed days per site. Logs are expected only when you operate.

Missing-log report
Every inspection that was expected but not recorded, day by day.

Daily email alerts
Yesterday's missing logs, sent to the people you choose from each site's own email.

Late-entry flags
Entries received after their log was signed are listed for review.

Device clock check
Finds phones and tablets with the wrong date, time or time zone.

Sites that inspect once a day keep working as before. The calendar and the daily email are turned on only where you want them.

FSMA Compliance, Built In NEW

The records the FDA's Food Safety Modernization Act rules ask for, in one FSMA menu, site by site.

- **An FSMA profile per site.** Tick the rules each site is under. A farm and a packinghouse can follow different rules.
- **Screens follow the profile.** Each site is asked only for the records its rules need. Sites without a profile work as before.
- **What is missing, at a glance.** Every screen lists what is in place and what is still due.
- **The same protection.** Approved and signed records are locked, never deleted, and kept in the audit trail.

FDA RULES COVERED

Produce Safety (21 CFR 112) | Preventive Controls (21 CFR 117) | Intentional Adulteration (21 CFR 121) | Sanitary Transportation | FSVP importer

What Continuum Keeps for Each Rule

Built into the same system as your logs and FSSC records.

FDA food safety plan
HACCP plans with the PCQI, a preventive-control type per hazard and the owner's signature at approval.

Recall plan
A current recall plan before any HACCP approval, with consignee and public notice, effectiveness checks and disposition.

Supply-chain program
Approved suppliers, their controls and verification, with an annual onsite audit for serious hazards.

Agricultural water
Sources, yearly pre-harvest assessments, E. coli testing schedules and treatment monitoring (2024 rule).

Produce safety
Written practices for every requirement, the yearly exemption review and soil amendment records.

Food defense plan
Vulnerability assessment, actionable steps, mitigation strategies, monitoring and reanalysis every 3 years.

Sanitary transportation
Procedures by role, specifications given to each carrier, written agreements and carrier training.

FSVP importer
DUNS and qualified individuals, one FSVP per food and foreign supplier, verification and 3-year reevaluation.

Records review
Monitoring and corrective-action logs reviewed within 7 working days, tracked on the HACCP screen.

Know Before the Auditor Does

The system checks the rule, not just the form.

CHECKS BEFORE APPROVAL

- A HACCP plan with preventive controls needs a current recall plan, and its supply-chain controls need approved suppliers
- An FSVP needs its hazard analysis, supplier evaluation and verification activity
- Food defense and HACCP plans are signed by the owner or operator

FLAGS ON THE SCREEN

- STOP USE on a water source after a failed test, until a corrective measure is recorded
- Do not import: an FSVP not approved, suspended, or with an unacceptable result still open
- Overdue assessments, verifications and reevaluations

FSMA: the U.S. Food Safety Modernization Act. Whether a rule applies to your operation is your decision; the FSMA profile records it.

CanadaGAP Program Records NEW

For operations certified under CanadaGAP. Certification is earned at your audit; Continuum keeps the records and the reminders.

- **Every form in its place.** Link each CanadaGAP form to the log that holds it, or note where it is kept or why it does not apply.
- **Forms as mobile logs.** The record-keeping forms (G to Q) and the annual forms (A to V) import as logs, filled in on the phone or the web, with photos.
- **Annual records on screen.** Internal audit, mock recall, food safety culture review and the annual program review, each signed by the person responsible.
- **What is due, at a glance.** An overview of what is overdue or due this season, a reminder each Monday, and an audit pack that prints the season.

BOTH CANADAGAP MANUALS

Fresh Fruits and Vegetables | Greenhouse Product

OPERATION TYPES

Production | Packing | Storing | Repacking | Wholesaling | Brokerage

SRRC for Mexico (SENASICA) NEW

For production units, harvests and field packing certified, or working toward certification, in SENASICA's Contamination Risk Reduction Systems.

The 15 modules
Records organized by the 15 modules of SENASICA's evaluation, following the modality: production, harvest or field packing.

Bitácoras on the phone
The SRRC bitácoras import as logs, filled in on the mobile app or the web like any other log.

Pesticides and harvest check
Authorized products with COFEPRIS registration and their intervals. Applications the label does not cover are refused; check a field before the crew goes in.

Certificate dates
Six months of evidence before the evaluation, the maintenance audit a year after the certificate, and the renewal window.

The official guide as a self-audit
SENASICA's evaluation guide (Technical Annexes 1 and 2) imports as a self-audit, in Spanish as SENASICA publishes it.

Pack and reminders
An SRRC pack prints everything for the evaluator. The person responsible and the technical advisor get what is due each Monday.

Turned On Only Where You Need Them

Optional modules, turned on for the company and followed site by site.

HOW THE MODULES WORK

- A system administrator turns CanadaGAP, SRRC or Social responsibility on; each site then follows the modules it needs
- One Programs menu shows each person only the modules their sites follow
- A module that is off is hidden. Its records are kept and come back when it is turned on again

THE SAME PROTECTION

- Records are never deleted. An entry made in error is voided with a reason
- Signed records cannot be changed, and every change is kept in the audit trail
- CanadaGAP records are kept at least 4 years

Continuum Traceability adds the CanadaGAP and SENASICA traceability records: mock recalls, recall notices, unit codes and origin tags. SENASICA is Mexico's National Service for Agri-Food Health, Safety and Quality. SRRC certification is granted by SENASICA; CanadaGAP certification by your certification body.

Social Responsibility NEW

For farms, packers and shippers whose buyers ask for a social audit, or that need Mexico's STPS labor certificate to export.

- **Plain words, next steps.** A What to do tab with getting-started steps and a card per topic the audits look at, each with a Do it now button.
- **Policies, and how workers were told.** Each policy with its approval, its languages and how it was explained, reviewed every year.
- **Complaints without names.** Every worker complaint, anonymous ones too, followed until the worker has an answer.
- **Checks on schedule.** Self-assessment, age checks, wages and hours, worker representative meetings and rights training, with on-screen questions and a signature.

SOCIAL AUDITS AND CODES

SMETA · GLOBALG.A.P. GRASP · Azzule · Fair Trade USA · EFI · Fair Food Program · Buyers' codes · STPS (Mexico)

MOBILE LOGS

Worker housing · Health & safety walk-through · Field welfare check

Labor contractors
License, signed contract and a yearly check that workers paid no fees for their job.

Audits and findings
Each social audit, the findings to correct, who does it and by when.

Ready for the auditor
One printout for auditors and buyers, and a reminder each Monday of what is due.

No payroll, wage rates, identity documents or medical records are stored: the records say what was checked, what was found and where the documents are kept. Audit and program names are trademarks of their respective owners; Continuum is not affiliated with or endorsed by them.

Every Person in Their Own Language NEW

English, Spanish and French (Canada), chosen by each person and offered site by site.

WHAT FOLLOWS THE LANGUAGE

- Screens, menus and messages
- Printed reports, with the language chosen at print time
- Accents and typographic quotation marks printed correctly in every PDF

SET UP IN MINUTES

- Each site chooses the languages its people can use; English is always offered
- Each person picks a language in their own settings
- Every language is named in both languages, so each person finds their own: Français (Canada) ~ French (Canada)

For Canadian operations
French screens and reports for teams in Quebec and across Canada, alongside CanadaGAP.

For mixed crews
Supervisors in English, field crews in Spanish, a packinghouse in French, all in one system.

A manual in each language
The user manual is available in English, Spanish and French (Canada).

The mobile app's own labels are in English and Spanish. Your questions, areas and forms are entered in English and Spanish.

Configure Monitoring and Self-Audits, No Code Required

Your program, your rules, configured by your own team.

- Add, change or disable buildings, locations, areas and monitoring questions
- Add, change or disable self-audits, modules and questions as your program evolves
- Inspect several times a day, daily, weekly, twice a month, monthly, quarterly, twice a year or annually
- Set and adjust scoring points for every audit module
- Up to 4 responses per question; mark any question required or optional
- User notification lists route alerts to the right people automatically

11 ANSWER TYPES

Yes/No | Yes/No Required | Numeric Range | Numeric Only | Alpha-Numeric | Dropdown List | Checkboxes | Date | Time | GPS | Signature

Also Included

More of what Continuum Food Safety already does.

FS Manager
Consultants and multi-company groups manage users, permissions and policy templates for every company from one login.

Produce-ready logs
Pre-harvest and pre-operational inspections, insect traps, agricultural activities and crop application rates.

Certification documents
Import templates, then edit, approve and publish your certification documents with revision history.

Maintenance requests
Facility and equipment maintenance tracked apart from corrective actions, with an open and closed log.

Frequency dashboard
A company-wide view of completed and open inspections for every frequency.

Self-audit analytics
Signed self-audit reports, line and bar charts, dashboards and benchmark charts.

WHAT TO EXPECT

See it built for you
Tell us how you manage food safety today and we will show you the same program in Continuum. Same-day consultations are available.

Free consultation and estimate
Pricing depends on the number of mobile devices that run the Continuum app. People who use it in a web browser do not count toward that number.

Your data, your program
Continuum is a hosted subscription service. Your team builds and manages the program, and you can export your data.
