Inspect faster.
Be audit-ready every day.

Continuum QC/QA takes quality from the field to the audit file. Inspect on a phone or tablet with the mobile app; run traceability, audits, recalls and documents on the web.

iOS & Android apps | Web browser | Online & offline | English & Español

NEW **New:** the optional **CanadaGAP** and **Mexico (SENASICA)** modules, sites in **Mexico** as well as the United States and Canada, a new site set up like another in one go, and trusted devices for the mobile apps (pages 3 to 6).

THE IMPACT: PAPER VERSUS CONTINUUM QC

PAPER-BASED PROCESS

5–6 inspections a day

Record findings → photos → transfer to Excel → insert & resize photos → email report

→

CONTINUUM QC MOBILE

18–27 inspections a day

Record findings → photos → email or save a PDF report

Up to 5× more inspections per inspector, from a produce customer's before-and-after comparison. Results vary by operation.

HOW IT WORKS

1 Build your inspection

Set up commodities, varieties, packs, sizes, conditions and defects yourself. No developer needed.

2 Capture in the field

Record findings, up to five photos per data point, GPS and signature. Works with no signal.

3 Send the report

Press save. Generate a PDF or email it to a preset list, in each recipient's language.

WHERE DO YOU OPERATE?

United States

- FSMA 204 records and the FDA spreadsheet
- FDA recall notices to customers
- Net weight checks to NIST Handbook 133

Canada

- SFCR mock recall every 12 months
- One CSV trace file for the CFIA in 24 hours
- CanadaGAP module: forms, inputs, binder

Mexico

- SENASICA SRRC: certificates, audits, self-check
- Harvest crews (BPCo), mango hot-water treatment
- COFEPRIS registrations; NOM-002 net weight

Up to 5×
More inspections per inspector

59 + 2
QA features and optional modules

Apps, portal and reports

The Mobile App

Purpose-built for inspectors working in the field.

Bilingual by design
Field teams work in English or Spanish, side by side, on the same inspection.

Smart commodity assignment
Users are assigned commodities and see only what applies to them.

Online and offline
Online, data uploads immediately. Offline, it is stored on the device until the connection returns.

Rich photo capture
Every question, condition, or defect can record up to five photos, plus GPS and signature.

The Platform

Access, control, and flexibility that don't depend on a vendor ticket.

Access anywhere
iOS, Android, and any computer with a browser and an internet connection.

Bilingual platform
English and Spanish supported across the whole system, web and mobile.

Self-managed
Your team configures and administers the system directly.

Fully customizable
Tailor commodities, questions, and workflows to how you actually inspect.

Configuration

Everything below can be changed by your team, with no developer required.

- Use the predefined commodities or build your own
- Varieties, packaging and sizes
- Conditions and defects, or import USDA-standard libraries
- Required or optional, question by question
- Centralized sync: push to devices, or sync from a device

11 FLEXIBLE ANSWER TYPES

Yes/No · Yes/No Required · Numeric Range · Numeric Only · Alpha Numeric · Drop-Down List · Check Boxes · Date · Time · GPS · Signature

IN THE FIELD

One customer went from 5–6 inspections a day on paper to 27 with Continuum QC.

NEW · CONTINUUM QA

Built for the day things go wrong

Continuum QA is optional and is switched on site by site. It works from the inspections and lots you already record, so there is no second system and no copying.

An auditor arrives tomorrow

Gather the records an auditor asks for into one pack.

Audit Pack · Internal Audits · External Audits · Controlled Documents · Management Review

A recall is called

Trace a lot back to the field and forward to every customer, and practice before it counts.

Recalls · Mock Recalls · Traceability Events · Lot Disposition

A customer files a claim

Find the lot and farmer behind it, assign a fix, and close the loop.

Customer Claims · Corrective Actions · Non-Conforming Product · Customer Specifications

A farmer's product keeps failing

Score farmers, send fix requests and review approvals, with results in the optional farmer portal.

Grower Scorecards · Grower Action Requests · Approved Growers · Field Audits

Trouble starts in the packing house

Catch drift early with trend alerts, swab programs, sanitation and wash-water checks, recorded on the floor with the Food Safety app.

Trend Alerts · Environmental Monitoring · Sanitation · Wash Water · From the FS App

Every day, on the record

Today shows each person what is due at their sites, and Trend Alerts emails managers each morning what is late or out of range.

Today · QA Dashboard · Trend Alerts · Inspection Change History

ALL 59 QUALITY ASSURANCE FEATURES (PLUS QA SETUP), AND THE OPTIONAL MODULES

Overview: Today · QA Dashboard · Company Overview · Cross-site Reports · Site Setup · Trend Alerts · Audit Pack · QA Setup

Lots and inspections: Lot Disposition · Inspection Sign-off · Inspection Change History · Sampling Plans · Customer Specifications · Shipments · Lots for an order · Quality Certificates · Shelf Life · Cold Chain · Load Inspections · Lab Results · Control Charts

Packing house: Environmental Monitoring · Sanitation · Label Checks · Wash Water · Metal Detection · Net Weight Checks · Glass and Brittle Plastics · Water Testing · Maintenance · Calibration Records · From the FS App · Locations, Areas and Equipment

Problems and actions: Non-Conforming Product · Corrective Actions · Customer Claims · Recalls · Mock Recalls · Change Control · Risk Register

Growers, suppliers and inspectors: Approved Growers · Approved Suppliers · Field Audits · Grower Certificates · Grower Action Requests · Grower Scorecards · Inspector Training · Inspector Calibration

Traceability: Traceability Events · Agency Connections · Buyer Compliance · Market Prices

People and security: Employee Training · Visitors and Contractors · Food Defense

Management: Controlled Documents · Internal Audits · External Audits · Quality Objectives · Management Review

CanadaGAP (optional module): CanadaGAP Programme · CanadaGAP Forms · Agronomic Inputs · Input Product Library · Assessments · Pest Program

Mexico (optional module): SENASICA Programme · Pesticide and Fertilizer Applications · Input Products and Receipts · Harvest Crews · Hot-Water Treatment · Pest and Wildlife Control

ONE SYSTEM

QA works on the inspections your team already records. A lot's inspection, hold, lab tests and certificates are in one place.

NEW · TRACEABILITY, SHIPMENTS AND MANY SITES

From the field to every buyer, at every site

Continuum QA now follows a lot all the way: traceability records, shipments at volume, your buyers' systems, floor records from the Food Safety app, and the tools a company with many sites needs.

FSMA 204 TRACEABILITY, EVENT BY EVENT

Harvest — Recorded by the site, or by the farmer in the portal → **Cooling** — Where and when → **Initial packing** — Started from the inspection → **Shipping** — Started from the shipment → **Receiving** — From a farmer or another site → **Transformation** — Repack, relabel, commingle → **Trace** — The FDA's spreadsheet in minutes

Traceability records for FSMA 204

- Each event with its key data elements; what is missing is listed, not refused
- Trace a lot back to the field and forward to every customer, across your sites
- The FDA's sortable spreadsheet of a trace or a period; events imported from a CSV file

Traceability Events · Harvest Records · Recalls

Shipments at packing-house volume

- A day's loads from your shipping file, or by scanning lot codes
- Lots for an order: the lots that meet the customer's specification
- Exceptions: lots shipped outside spec, not inspected or not traced

Shipments · Lots for an order · Load Inspections

Your buyers' systems

- Traceability files in each system's template: sent by SFTP to FoodLogiQ and ReposiTrak, or ready to upload by hand where a system takes them
- Each buyer's yearly questionnaire, audit information and due dates in one place
- Organic certificates checked through USDA Organic INTEGRITY; daily prices from USDA Market News

Agency Connections · Buyer Compliance · Market Prices

The Food Safety app on the floor

- 15 logs on a phone or tablet: pre-op and cleaning, glass, metal detectors, wash water, swabs, visitors, repairs, maintenance and instruments
- Listed in the app under each site's own locations and areas; the Audit Pack shows where each was recorded
- One device list for both apps, showing which apps each tablet runs

From the FS App · Locations, Areas and Equipment

Many sites, one company

- Today: each person's work for the day, at one site or all of theirs
- Company Overview: the sites that need attention; Cross-site Reports: farmers, customers and commodities across your sites
- A daily digest email, at the hour each person chooses; Site Setup copies one site's setup to many

Today · Company Overview · Cross-site Reports · Site Setup

Administration for hundreds of users

- Sites, farmers and users imported from spreadsheets (CSV); a new site set up like another in one go (Copy Site Setup)
- Permission sets by job, given to many users at once
- Everyone in one list, a history of every administration change, and password reset by email

People · Permission Sets · Copy Site Setup

FoodLogiQ, ReposiTrak, TraceGains, Azzule, RizePoint and FoodLink are trademarks of their respective owners; each company connects with its own accounts, and Continuum is not affiliated with or endorsed by them. This product uses USDA's Organic Integrity Database API but is not endorsed or certified by USDA. The FDA will not enforce the Food Traceability Rule before July 20, 2028.

BUILT FOR VOLUME

One site or hundreds: built for a company with a thousand users and devices, and tested with a day of 500 shipments and 2,000 lots.

NEW · UNITED STATES, CANADA AND MEXICO

One system for every country you grow and pack in

Each site has a country. Where the rules differ, Continuum follows the site's country; everything else works the same everywhere.

	United States	Canada	Mexico
Net weight checks	NIST Handbook 133 tolerances (MAV)	SFCR Schedule 4 tolerances, metric packs	NOM-002-SCFI-2011, metric packs (or NIST 133 when packing for the US)
Recall notice	FDA, Reportable Food Registry within 24 hours	CFIA, told immediately	SENASICA, told the same day
Mock recalls	On the schedule you set (optional)	At least every 12 months (SFCR s. 84)	Every 12 months to start with (SRRC settings)
Traceability file	Sortable spreadsheet within 24 hours (FSMA 204)	One CSV file within 24 hours (SFCR s. 91)	Lots traced back and forward; rejections reported the same day
Sanitizer registration	EPA Reg. No.	Health Canada number (or PCP / DIN)	COFEPRIS registration (or EPA Reg. No.)
Pesticide residues	EPA tolerances (40 CFR 180)	Health Canada MRLs; 0.1 ppm general limit	The COFEPRIS registration's, or the main export market's
Farmer certificates	USDA GAP first, then GLOBALG.A.P., PrimusGFS, SQF, BRCGS, FSSC 22000 and more	CanadaGAP first, then the same list	SENASICA SRRC first, then the same list
Temperatures	°F to start with	°C to start with	°C to start with

HOW A SITE GETS ITS RULES

1 Each site has a country

QA Setup shows it, read from the site's address; a QC Manager can change it. A site in the Mexico module follows Mexico.

2 The rules follow

Tolerances, recall notices, mock recall timing, units and registration numbers switch to that country's.

3 The same everywhere else

Pages, history, alerts, the audit pack and both languages work the same in every country.

OPTIONAL MODULES, PER COMPANY AND SITE

CanadaGAP module (v11)
Readiness form by form; agronomic inputs (H1, H2) with each field's earliest acceptable harvest date; the annual assessments; the pest program; the forms kept in the other QA pages; and the auditor's binder.

Mexico module (SENASICA SRRC)
Registration and modalities, certificates, audits and findings, rejections reported the same day, hazard analyses, the self-check and the evaluator's binder; harvest crews (BPCo) and the hot-water treatment of mangoes (USDA APHIS T102-a).

RECORDS YOU CAN STAND BEHIND

Kept at least 2 years
Readings are voided with a reason, never deleted; a file removed from a record is kept for the auditor.

Every change in the history
Who, when and what changed, on every record and every setting.

Ready for an inspector
The audit pack, the regulator's CSV of a trace and each feature's records print in minutes, in English or Spanish.

Visitors' privacy
A privacy notice at sign-in and health answers cleared after the months you set.

Continuum keeps the records; meeting a regulation depends on each operation's own food safety program, and certification stays with each program and its auditors (SENASICA certifies under the SRRC). PrimusGFS, SQF, BRCGS, GLOBALG.A.P., CanadaGAP and FSSC 22000 are trademarks of their respective owners; Continuum is not affiliated with or endorsed by them.

SITES IN EVERY COUNTRY

One account for all your sites: each follows its own country's rules, and your team uses the same pages, in English or Spanish.

Governance

Control who sees what, and route reports automatically.

SECURITY

- Individual page-level security
- Permission sets by job
- Trusted devices: each tablet signs with a key in its security hardware, with no periodic sign-in
- QA per site, with QC Managers approving what matters
- A history of every administration change

REPORTS & DISTRIBUTION

- Generated in PDF; export data to Excel
- Available in English and/or Spanish
- Emailed to a predefined distribution list, in each recipient's preferred language
- A daily digest email for each person, at the hour they choose
- Optional: automatically email inspections

Scale

Open the door to your farmers, without opening the door to risk.

- Unlimited farmers and growers
- Unlimited inspections
- Sites, farmers and users imported from spreadsheets
- Optional farmer portal: farmers generate their own reports, with visibility but not control
- Farmers answer action requests, and record their harvests where a site turns it on, from their own portal

WHAT TO EXPECT

Predefined or your own

Use the commodities and formats included, or have us review your own forms for a quote.

Free consultation and estimate

Tell us what you inspect and how many sites you run. We send a free estimate.

Start small, grow

Use it on one commodity or many, and turn on QA when you are ready. Inspections and farmers are unlimited.

INCLUDED WITH CONTINUUM QA

- **QA user manual in English and Spanish**
- **Trend Alerts and a daily digest by email**
- **Audit Pack PDF for any period**
- **Site Setup shows what each site still needs**
